

INSERT FOR IMPERIAL ASSAULT

Model IMPERIAL-001 Miniatures Insert Kit for Imperial Assault Base Box

Complete insert kit with removable trays and storage for miniatures, cards, tokens through Wave 4

General Construction Tips

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.
- 3) Keep some paper towels handy for cleanup during build.
- 4) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored.
- 5) Check the build diagram included in the package for reference, including all parts, as well as build tips specific to this insert.
- 6) Always dry fit pieces first to ensure a good fit and to better understand how the kit goes together.
- 7) Allow your finished insert to dry overnight.
- 8) You can optionally sand and even stain your insert.
- 9) Don't hesitate to reach out to us if you have questions!

Unlike many of our inserts, this is not a licensed insert. All trademarks/marks are the property of their respective owners. (v2)

Build Instructions

This storage solution is designed to fit inside the Imperial Assault base box. There are a total of 14 trays to store all of your components and the expansions through Wave 4 (Bantha). These instructions will cover constructing the removable trays one-by-one. Together, these components provide a versatile storage solution with room for the base game and expansion content.

After each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips on plate #2). Also, remember to dry fit everything so you understand where to place glue and how everything fits together. Let's begin by building the jumbo miniatures tray (A). This tray holds AT-STs or other large miniatures.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom of center divider (B) and connect them.
- 2) Next, apply glue to the side tabs of center divider (B) and the bottom of side wall (C) and connect. Repeat for the other side wall (C).
- 3) Finally, apply glue to bottom and sides of end wall (D) and connect. Repeat for the other end wall (D).

Next, let's construct the tall miniatures storage tray (E).

- 1) Lay base (E) down on your workspace. Apply glue to the bottom of center divider (F) and connect them.
- 2) Next, apply glue to the end tabs of center divider (F) and the bottom of end wall (G) and connect. Repeat for the other end wall (G).
- 3) Finally, apply glue to bottom and ends of the tall side wall (H) and connect. Repeat for the other low side wall (I).
- 4) Once dry, you can arrange your dividers, as needed. A small dab of glue can be used to anchor each divider if you want them to be permanently anchored.

Next, let's construct the shallow miniatures storage tray (J).

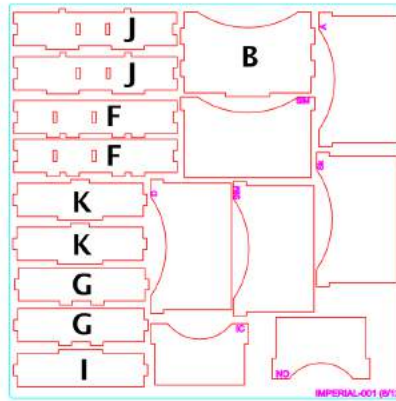

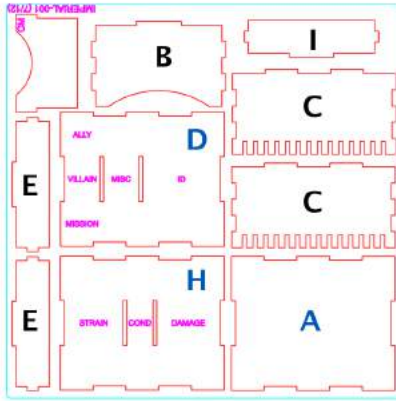

- 1) Lay base (J) down on your workspace. Apply glue to the bottom of center divider (K) and connect them.
- 2) Next, apply glue to the end tabs of center divider (K) and the bottom of end wall (L) and connect. Repeat for the other end wall (L).
- 3) Next, apply glue to bottom and ends of the side wall (M) and connect. Repeat for the other side wall (M).
- 4) Finally, place a small dab of glue on the underside of the divider tabs of each divider and place in the tray.

Next, let's construct the bantha storage tray (O).

- 1) Lay base (O) down on your workspace. Place glue on the bottom of divider wall (P) and connect it to tray base (O).
- 2) Next, place glue on the side tabs of divider wall (P) and on the bottom of "L" wall (Q) and connect. Repeat on the other side with the other "L" wall (Q).
- 3) Next, place glue on both end tabs and the bottom of tray end wall (R) and connect.
- 4) Finally, place glue on the end tabs and bottom of divider wall (P) and connect.
- 5) You may place a divider (S) or two in the tray after the glue has had a few minutes to set to ensure a perfect fit. Once the tray is dry and you have determined how you want to use the tray to store your figures, you can glue the dividers into the tray.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

Build Instructions

Next, let's construct the large card storage tray (A).

Remember, after each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips). Also, remember to dry fit everything so you understand where to place glue and how everything fits together.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom of long side wall (C) and apply glue to the bottom and both side tabs of end wall (B) and then connect all three together.
- 2) Next, apply glue to the bottom of long side wall (C) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (B) and connect. You may want to place a divider or two into the tray to ensure a perfect fit.

Next, let's construct token tray #1 (D). Note that this token tray does not have tabs on the top of the long and end walls, unlike (H) below.

- 1) Lay base (D) down on your workspace. Apply glue to the bottom of the two center dividers (E) and connect them.
- 2) Next, apply glue to the end tabs of both center dividers (E) and the bottom of long wall (F) and connect. Repeat for the other long wall (F).
- 3) Finally, apply glue to bottom and sides of the end wall (G) and connect. Repeat for the other end wall (G).

Next, let's construct token tray #2 (H). This token tray builds the same way as token tray #1 (D), above. Note that this token tray has tabs on the top of the long and end walls.

- 1) Lay base (H) down on your workspace. Apply glue to the bottom of the two center dividers (I) and connect them.
- 2) Next, apply glue to the end tabs of both center dividers (I) and the bottom of long wall (J) and connect. Repeat for the other long wall (J).
- 3) Finally, apply glue to bottom and sides of the end wall (K) and connect. Repeat for the other end wall (K).

Next, let's construct the three-lane storage tray (L).

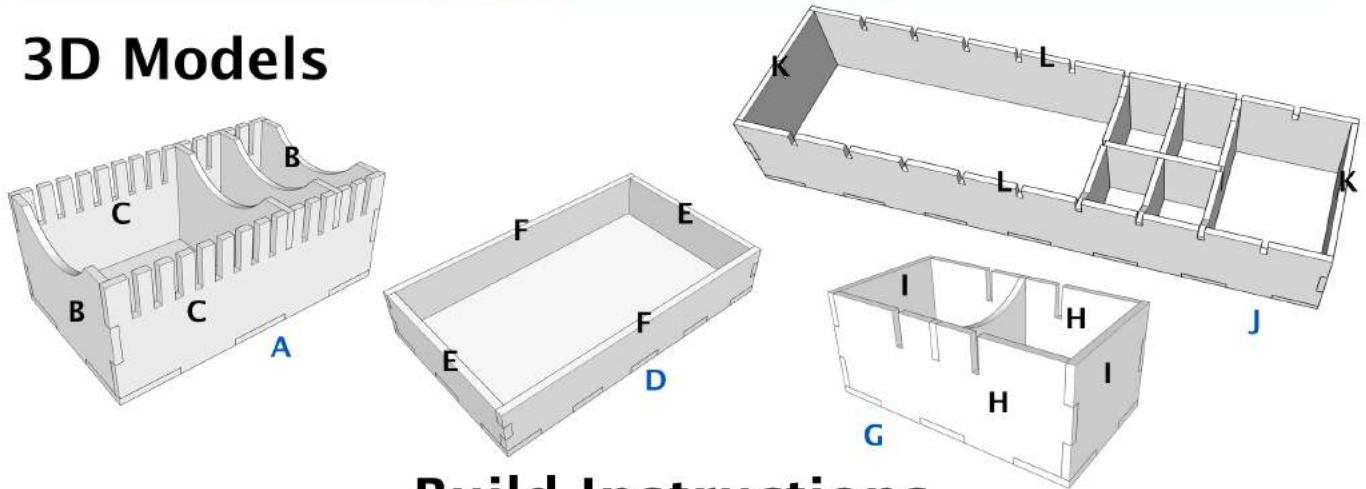

- 1) Lay base (L) down on your workspace. Apply glue to the bottom of long side wall (N) and apply glue to the bottom and both side tabs of end wall (M) and then connect all three together.
- 2) Next, apply glue to the bottom of long side wall (N) and connect it to the structure.
- 3) Next, place glue on the bottom and side tabs of end wall (M) and connect.
- 4) Finally, place a small dab of glue on the underside of the center divider notches of each divider (O) and place in the tray. You may optionally omit one or both dividers or choose to glue them in later, once your insert storage plan is settled.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

Build Instructions

Finally, let's build the last few trays! After each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips). Also, remember to dry fit everything so you understand where to place glue and how everything fits together.

Let's build the small card storage trays now. Note there are two small card storage trays. Also note that one end wall (B) is located on frame #12.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom of long side wall (C) and apply glue to the bottom and both side tabs of end wall (B) and then connect them together on base (A).
- 2) Next, apply glue to the bottom of long side wall (C) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (B) and connect. You may want to place a divider or two into the tray to ensure a perfect fit; just make sure you have cleaned up all of the excess glue.
- 4) Repeat this process for the second small card storage tray.

Next, let's construct the doors storage tray (D).

- 1) Lay base (D) down on your workspace. Apply glue to the bottom of long side wall (F) and apply glue to the bottom and both side tabs of end wall (E) and then connect all three together.
- 2) Next, apply glue to the bottom of long side wall (F) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (E) and connect.

Next, let's construct the small miniatures storage tray (G).

- 1) Lay base (G) down on your workspace. Apply glue to the bottom of long side wall (H) and apply glue to the bottom and both side tabs of end wall (I) and then connect all three together.
- 2) Next, apply glue to the bottom of long side wall (H) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (I) and connect.
- 4) You may want to place a divider into the tray to ensure a perfect fit. Glue the divider in later once you understand how you want to use the tray.

Finally, let's construct the medium miniatures storage trays (J). Note there are two medium miniatures storage trays. Also note that one complete set of parts for a medium miniatures storage tray (J) are located on frame #4, in addition to the parts pictured above on frame #5.

- 1) Lay base (J) down on your workspace. Apply glue to the bottom of long side wall (L) and apply glue to the bottom and both side tabs of end wall (K) and then connect all three together.
- 2) Next, apply glue to the bottom of long side wall (L) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (K) and connect. You may want to place a divider or two into the tray to ensure a perfect fit, just make sure you have cleaned up all of the excess glue.
- 4) Repeat this process for the second medium miniatures storage tray.

Allow your trays to dry overnight and then place your components into the trays. You have completed the project. +2 WISDOM, +3 CRAFTING
