

Congratulations! You have completed the construction of your new insert. Allow your insert to dry overnight, place it in your game box, and organize your cards. If you have any questions/concerns, don't hesitate to contact us. Finally, please take a moment to review your new insert on our website.

# LEG-005 INSERT

Check out our line of Bit Boxes. We have a multitude of designs to fit every need. We offer two sizes and internal compartment configurations from two – eight compartments. (BB-004 pictured; lid not shown)

Plus, our bit boxes are designed to fit inside the card lanes of most of our inserts, so you will always know where your bits are! Let Go7 help you store your bits in style.

THIS INSERT KIT FITS INSIDE THE LEGENDARY SECRET WARS BOX

## Go7 Gaming Heritage Line Inserts

This line of inserts utilizes acrylic dividers and includes a base for the insert, in most cases. These inserts are structurally designed to provide a rock-solid enclosure to protect your cards and bits for a lifetime. Of course, they cost more to produce and to ship. Also, because of the inclusion of the base, they are a little easier to build. The insert base provides an almost foolproof platform for building.

## Go7 Gaming Value Line Inserts

Our Value Line inserts lack bases, but provide additional structural support via strategically placed supports. Also, we use wood dividers instead of acrylic dividers. With these changes, the cost of Value Line inserts is significantly less than our Heritage Line inserts, as well as competitor's equivalent inserts. Plus, we have designed our Value Line inserts to fit into less expensive USPS flat-rate envelopes. This is a huge win for U.S. customers and will also reduce the shipping costs for our international customers.

## General Construction Tips

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painters'/masking tape for some joins, but glue is always best.
- 3) Keep some paper towels handy for cleanup during build.
- 4) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored. Glue sticks are provided to assist with cleanup.
- 5) Always dry fit pieces first to ensure a good fit and to better understand how the kit goes together.
- 6) Allow your finished insert to dry overnight.
- 7) Don't hesitate to reach out to us if you have questions!

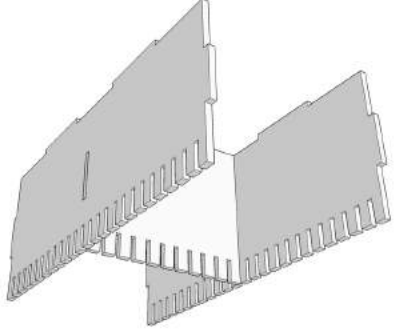

## 3D Model

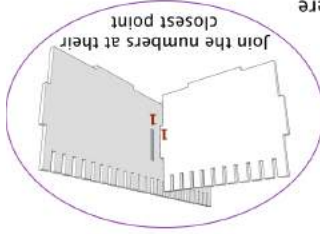

## Kit Plates

**Stage #2:** After joining the numbers 3 through 5, your build will look like this:

**Stage #1:** After joining the numbers 1 and 2, your build will look like this:

CONSTRUCTION BY THE NUMBERS

Each piece in this insert kit is marked with a number on the tabs and near the cutouts. To build, you start with the number 1 and find the two pieces with that number, glue and join. Then locate the number 2 until your insert is complete. Glue should be used sparingly on tabs and surfaces where two pieces meet. Dry fitting will show you where to glue. If you are cleaning up a ton of glue after each join, use less!

**Stage #3:** Following the number 5, simply glue and join the remaining two outer rails (see completed insert image on opposite page), allow to dry overnight, and then load your insert up with cards and dividers and have some friends over for a game!

The center compartment to the rear of the insert is not wide enough to store cards in the standard manner, but it will store a handful of cards at an angle. You may also use this area to store other things.
