

# LGC-003v2 INSERT

**Step #5:** Place glue on the left ends of the two center divider lanes (F) and on the bottom of insert end wall (G) where it touches insert base (E) and connect. Repeat on the other side with the second insert end wall (G).

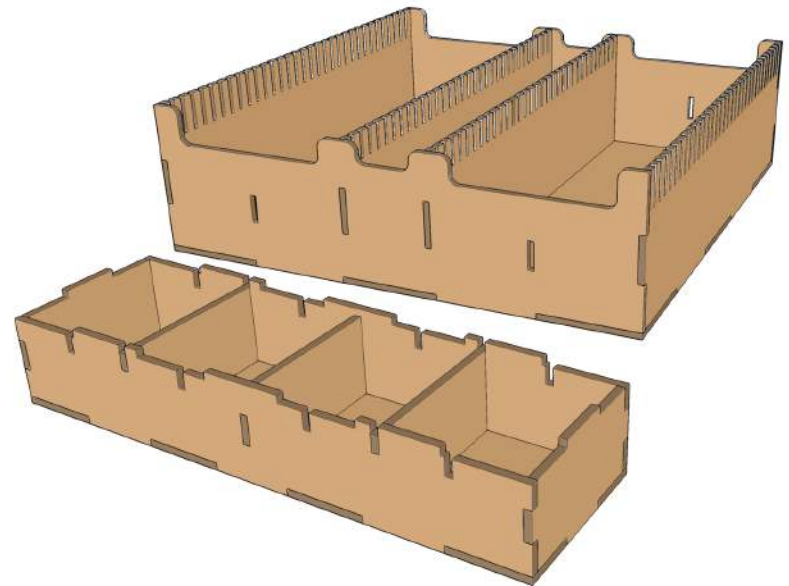

**Step #6:** Finally, place glue on both side tabs and the bottom of outer divider lane (H) and connect. Repeat for the other side.

Congratulations! You have completed the construction of your new insert. Allow your insert and tray to dry overnight, place it in your game box, and organize your cards and tokens. If you have any questions/concerns, don't hesitate to contact us. Finally, please take a moment to review your new insert on our website.

## HERITAGE LINE

THIS INSERT KIT FITS INSIDE THE NEW SMALL CORE BOXES FROM FFG SUCH AS AGOT 2.0 AND CONQUEST.

ESTIMATED CONSTRUCTION TIME: 20 MINUTES

MATERIALS REQUIRED: GLUE, MASKING/PAINTER'S TAPE

KIT INCLUDES:

- (1x) LGC-003 INSERT KIT  
w/8 COMPARTMENT TOKEN TRAY & LID
- (15x) LGC-DIV-009 ACRYLIC DIVIDERS

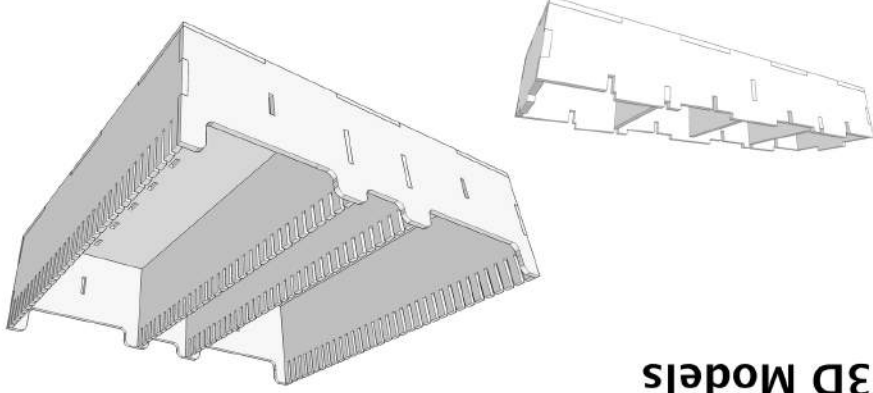

**AGE 14+**  
NOT A CHILDREN'S TOY

**GO**  
**GAMING**  
Made in the USA

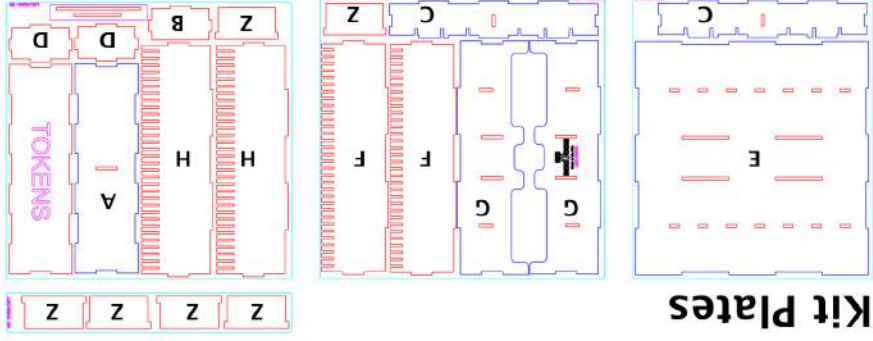

## General Construction Tips

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.
- 3) Keep some paper towels handy for cleanup during build.
- 4) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored. The small, thin sticks on your plates are for glue removal.
- 5) Always dry fit pieces first to ensure a good fit and to better understand how the kit goes together.
- 6) Allow your finished insert to dry overnight.
- 7) Don't hesitate to reach out to us if you have questions!

## 3D Models

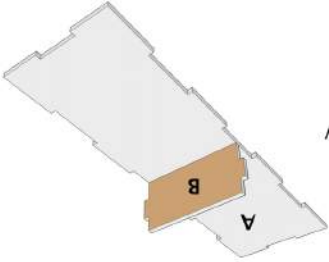

## Kit Plates

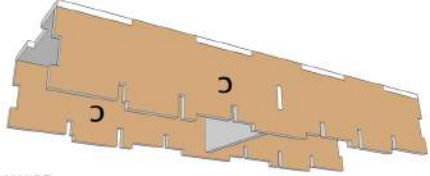

First, let's build the token tray.

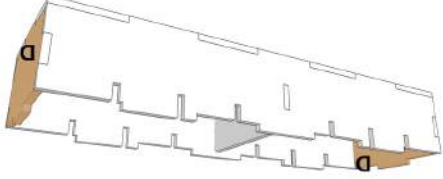

**Step #1:** Place glue on the bottom of center tray divider (B) and connect it to tray base (A).

**Step #2:** Place glue on the left end of the center tray divider (B) and on the bottom of long tray wall (C) where it touches tray base (A) and connect. Repeat on the other side with the second long tray wall (C).

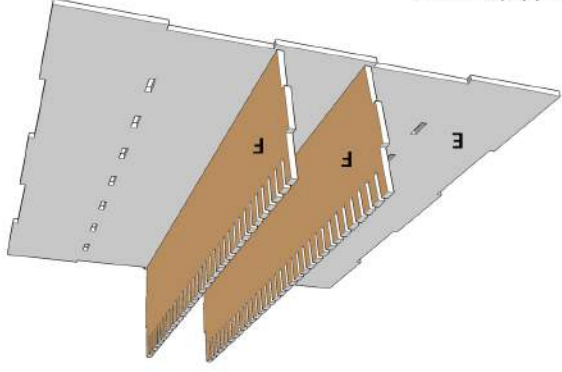

**Step #3:** Finally, place glue on both end tabs and the bottom of tray end wall (D) and connect. Repeat for the other side.

You may now install one or more of the included token tray splitters (Z) to create more compartments in your token tray. Placing a small amount of glue on the underside of the splitter tabs will secure them.

Once your token tray has had a few minutes to dry, place the lid on the tray.

Next, let's build the insert.

**Step #4:** Place insert base (E) on your workspace. Next, place glue on the bottom of inner divider lanes (F) and connect both inner divider lanes (F) pictured to the insert base (E). Note, (F) is not as tall as (H). Use (F)!

(F)
