

INSERT FOR B-SIEGED EXPANSION

Model BSIEGED-002 Miniatures Insert Kit for B-SIEGED Darkness & Fury Expansion

Complete insert kit with removable trays and storage for miniatures, cards, tokens

General Construction Tips

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.
- 3) Keep some paper towels handy for cleanup during build.
- 4) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored.
- 5) Check the build diagram included in the package for reference, including all parts, as well as build tips specific to this insert.
- 6) Always dry fit pieces first to ensure a good fit and to better understand how the kit goes together.
- 7) Allow your finished insert to dry overnight.
- 8) You can optionally sand and even stain your insert.
- 9) Don't hesitate to reach out to us if you have questions!

Unlike many of our inserts, this is not a licensed insert. All trademarks/marks are the property of their respective owners.

Build Instructions

This storage solution is designed to fit inside the B-SIEGED Darkness & Fury expansion box. There are a total of 7 trays to store all of your components. These instructions will cover constructing the removable trays one-by-one. Together, these trays provide a versatile storage solution with room for the expansion and Kickstarter content. We provide name tabs with this kit. **Once you have built your insert and determined where you will be storing everything, you can glue your name tabs in place.**

After each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips on plates #3/#5). Also, remember to dry fit everything so you understand where to place glue and how everything fits together. Let's begin by building the jumbo minis tray (A). Note: the second long divider (D) is located on plate #6 (not shown above.)

- 1) Lay base (A) down on your workspace. Apply glue to the bottom of long side wall (B) and to the bottom and both side tabs of end wall (C) and then connect all three together.
- 2) Next, apply glue to the bottom of the other long side wall (B) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (C) and connect. You may want to place a divider or two (D / E) into the tray to ensure a perfect fit, and you can later choose to glue the dividers in permanently once you know exactly how you want to store your minis.

Next, let's construct the tall minis storage tray (F). This tray is a great place to store your Kickstarter dragon.

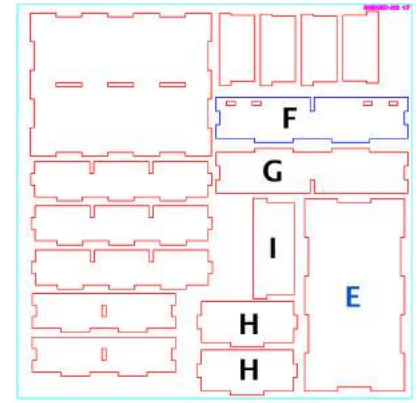

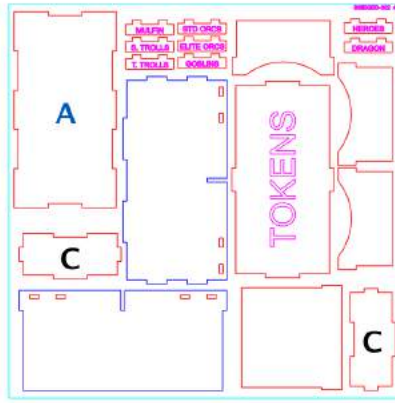

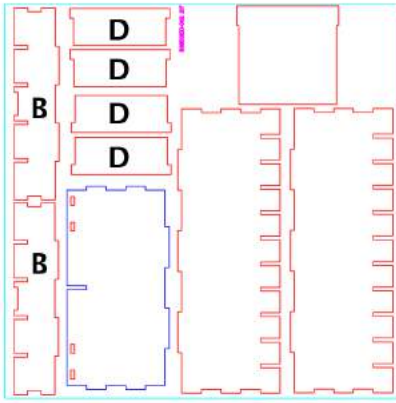

- 1) Lay base (F) down on your workspace. Apply glue to the bottom of long side wall (G) and to the bottom and both side tabs of end wall (I) and then connect all three together.
- 2) Next, apply glue to the bottom of long side wall (H) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (I) and connect. You may want to place a divider into the tray to ensure a perfect fit. You can later choose to glue the divider(s) in permanently once you know exactly how you want to store your minis.

Next, let's construct the card storage tray (K).

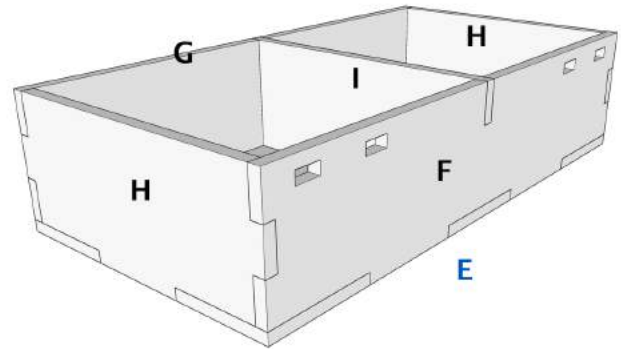

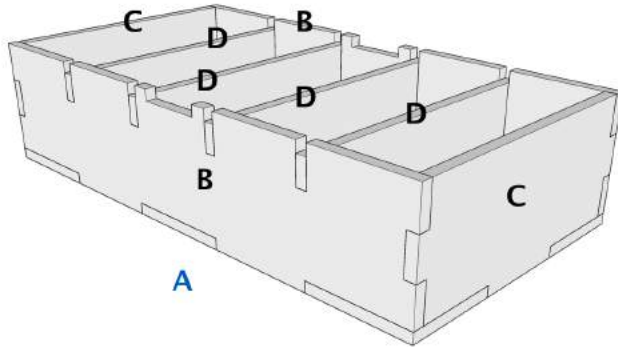

- 1) Lay base (K) down on your workspace. Apply glue to the bottom of long side wall (L) and to the bottom and both side tabs of end wall (M) and then connect all three together.
- 2) Next, apply glue to the bottom of the other long side wall (L) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (M) and connect. You may want to place a divider or two into the tray to ensure a perfect fit.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

Build Instructions

Next, let's construct the token storage tray (A). This tray is flexible and can be used for many purposes. Kickstarter backers may want to use this to store the four different tokens from the base game.

Remember, after each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips). Also, remember to dry fit everything so you understand where to place glue and how everything fits together.

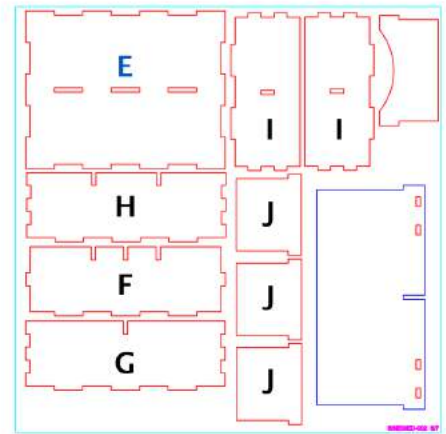

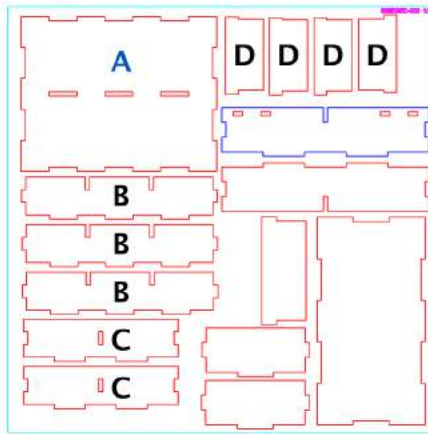

- 1) Lay base (A) down on your workspace. Apply glue to the bottom of long side wall (B) and to the bottom and both side tabs of end wall (C) and then connect all three together.
- 2) Next, apply glue to the bottom of the other long side wall (B) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (C) and connect.
- 4) You may want to place a divider (D) or two into the tray to ensure a perfect fit, and you can later choose to glue the dividers in permanently once you know exactly how you want to store your minis.
- 5) Finally, place the top on the tray and allow it to dry.

Next, let's construct the small monster storage tray (E).

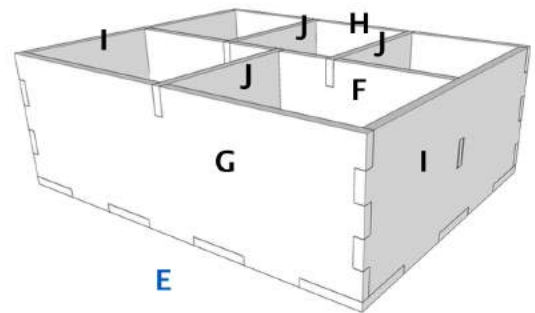

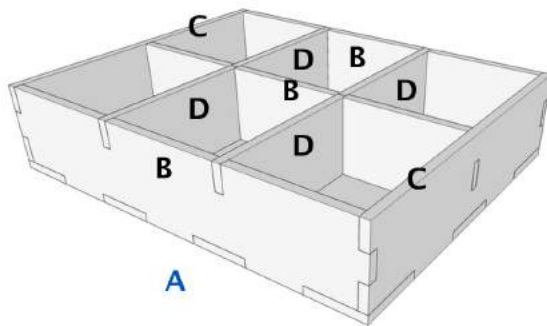

- 1) Lay base (E) down on your workspace. Apply glue to the bottom of long side wall (F) and to the bottom and both side tabs of end wall (H) and then connect all three together.
- 2) Next, apply glue to the bottom of long side wall (G) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (H) and connect.
- 4) You may want to place the divider (I) into the tray to ensure a perfect fit and you can later choose to glue the divider in permanently once you know exactly how you want to store your minis.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

Build Instructions

Finally, let's build the last two trays! After each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips). Also, remember to dry fit everything so you understand where to place glue and how everything fits together.

Let's build the small base heroes storage tray (A) now. This tray is essential if you backed the Kickstarter due to the large number of hero minis provided.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom of long center wall (B) and place in the center of base (A).
- 2) Next, place glue on the bottom and side tabs of end wall (C) and the end tabs of both sides of long center wall (B) in the center and connect end wall (C). Repeat for the other end wall (C).
- 3) Next, apply glue to the bottom of long outer wall (B) and connect it to the structure. Repeat on the other side for the last long outer wall (B).
- 4) You can place the small dividers (D) into the tray without glue to ensure a perfect fit. Glue them later once you determine how you want to store everything.

Finally, let's construct the large base heroes storage tray (E).

- 1) Lay base (E) down on your workspace. Apply glue to the bottom of long center wall (F) and place in the center of base (A).
- 2) Next, place glue on the bottom and side tabs of end wall (I) and the end tabs of both sides of long center wall (F) and connect. Repeat for the other end wall (I).
- 3) Next, apply glue to the bottom of long outer wall (H) and connect it to the structure. Repeat on the other side for the last long outer wall (G).
- 4) You can place the small dividers (J) into the tray without glue to ensure a perfect fit. Glue them later once you determine how you want to store everything.

Allow your trays to dry overnight and then place your components into the trays. You have completed the project.

Once your trays have had a night to dry, you should now determine how you want to store everything and you can then glue in the dividers for the various trays and attach the name tabs.
