

MILLENNIUM BLADES STORAGE KIT

MBLADES-001 Licensed Storage Solution for Millennium Blades

HERITAGE LINE

General Construction Tips

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.
- 3) Keep some paper towels handy for cleanup during build.
- 4) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored.
- 5) Check the build diagram included in the package for reference, including all parts, as well as build tips specific to this insert.
- 6) Always dry fit pieces first to ensure a good fit and to better understand how the kit goes together.
- 7) Allow your finished insert to dry overnight.
- 8) You can optionally sand and even stain your insert.
- 9) Don't hesitate to reach out to us if you have questions!

Build Instructions

This storage solution is designed to fit inside the Millennium Blades base box. There are a total of 7 trays to store all of your components. This solution allows for storage of sleeved or unsleeved cards. If your cards are unsleeved you will have room for future card expansions. These instructions will cover constructing the removable trays one-by-one. We have provided glue cleanup sticks (short, thin strips of wood) on plate #2. Use these to cleanup excess glue when you join two pieces of wood.

Let's begin by building the small card storage tray first (A). Be careful to ensure that the long divider walls are oriented in the same way.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom of long side wall (B) and apply glue to the bottom and both side tabs of end wall (C) and then connect them together on base (A).
- 2) Next, apply glue to the bottom of long side wall (B) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (C) and connect. You may want to place a divider or two into the tray to ensure a perfect fit, just make sure you have cleaned up all of the excess glue.

Next, let's construct the cash caddy/storage tray (D). This tray is designed to be used during play, in addition to providing a storage solution in the box.

- 1) Lay base (D) down on your workspace. Apply glue to the bottom and end tabs of center wall (E) and connect to base (D). Repeat for the second center wall (E).
- 2) Next, apply glue to the bottom and end tabs of rear wall (F) and connect it to the structure.
- 3) Finally, apply glue to the bottom of side wall (G) and connect it to the structure. Repeat for the second side wall (G).

Next, let's construct the shallow storage tray (H). This tray is designed to store the scorepad and oversized cards.

- 1) Lay base (H) down on your workspace. Apply glue to the bottom of long side wall (I) and apply glue to the bottom and both side tabs of end wall (J) and then connect them together on base (H).
- 2) Next, apply glue to the bottom of long side wall (I) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (J) and connect.

Next, let's construct the shallow token storage tray (K). This tray is designed to store the wooden cubes and sell markers.

- 1) Lay base (K) down on your workspace. Apply glue to the bottom and end tabs of center divider (L) and connect them.
- 2) Next, apply glue to the bottom of end wall (M) and connect. Repeat for the other end wall (M).
- 3) Finally, apply glue to bottom and ends of the side wall (N) and connect. Repeat for the other side wall (N).
- 4) Ensure that glue is not present in the four small notches on the underside of the tray. These notches are used to stack the trays together.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

Build Instructions

Next, let's construct the deep token storage tray (A). This tray is designed to store the star tokens.

Remember, after each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips). Also, remember to dry fit everything so you understand where to place glue and how everything fits together.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom of long side wall (C) and apply glue to the bottom and both side tabs of end wall (B) and then connect them together on base (A).
- 2) Next, apply glue to the bottom of long side wall (C) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (B) and connect.
- 4) Ensure that glue is not present in the four small notches on the underside of the tray. These notches are used to stack the trays together.

Finally, let's build the large card storage trays. There are two of these trays. Be careful to ensure that the long divider walls are oriented in the same way.

- 1) Lay base (D) down on your workspace. Apply glue to the bottom of long side wall (F) and apply glue to the bottom and both side tabs of end wall (E) and then connect them together on base (D).
- 2) Next, apply glue to the bottom of long side wall (F) and connect it to the structure.
- 3) Finally, place glue on the bottom and side tabs of end wall (E) and connect. You may want to place a divider or two into the tray to ensure a perfect fit, just make sure you have cleaned up all of the excess glue.

Allow your trays to dry overnight and then place your components into the trays. You have completed the project.
