

# INSERT FOR ELDRITCH HORROR™

EH-001 Storage Insert Kit for Eldritch Horror™

Complete insert kit with 9 removable trays and storage for cards, tokens, and tiles

## General Construction Tips

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.
- 3) Keep some paper towels handy for cleanup during build.
- 4) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored.
- 5) Check the build diagram included in the package for reference, including all parts, as well as build tips specific to this insert.
- 6) Always dry fit pieces first to ensure a good fit and to better understand how the kit goes together.
- 7) Allow your finished insert to dry overnight.
- 8) You can optionally sand and even stain your insert.
- 9) Don't hesitate to reach out to us if you have questions!

Unlike many of our inserts, this is not a licensed insert. All trademarks/marks are the property of their respective owners.

## Build Instructions

This storage solution is designed to fit inside an EH large box (core, MOM, UTP) and provides storage for cards, tokens, and tiles. There are a total of 9 removable trays to store components from both the base game and expansions. This storage system leaves 2mm free at the top for game manuals. These instructions will cover constructing the removable trays one-by-one.

After each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips on plates #1/#4/#6). Also, remember to dry fit everything **FIRST** so you understand where to place glue and how everything fits together. Let's begin by building the large card tray (A). This tray is designed to store large cards (sleeved or unsleeved).

- 1) Lay base (A) down on your workspace. Apply glue to the bottom and both ends of outer wall (B) and connect to base (A).
- 2) Next, place glue on the bottom of end wall (C) and connect.
- 3) Next, place glue on the bottom and ends of the other outer wall (B) and connect on the opposite side.
- 4) Next, place glue on the bottom of end wall (C) and connect.
- 5) Finally, I recommend placing a divider 2-3 spaces away from each end to ensure a perfect fit once dry.

Next, let's construct the small card tray (D). This tray is designed to store small cards.

- 1) Lay base (D) down on your workspace. Apply glue to the bottom and both ends of outer wall (E) and connect to base (D).
- 2) Next, place glue on the bottom of end wall (F) and connect.
- 3) Next, place glue on the bottom and both ends of the other outer wall (E) and connect on the opposite side.
- 4) Next, place glue on the bottom of end wall (F) and connect.
- 5) Finally, I recommend placing a divider 2-3 spaces away from each end to ensure a perfect fit once dry.

Next, let's construct the monster tile tray (G). This tray is designed to store the monster tiles (normal & epic).

- 1) Lay rear wall (H) down on your workspace. Apply glue to the end tabs on one side of divider wall (I) and place on rear wall (H). Repeat for the other 5 divider walls (I).
- 2) Next, place glue on the bottom tab of each of the divider walls (I) and connect base (G).
- 3) Finally, apply glue to the tabs on the open side of each divider wall (I) and connect each small front wall (J).
- 4) Ensure that excess glue inside the tile storage tray is removed so that tiles slide smoothly.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

## Build Instructions

Remember, after each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips). Also, remember to dry fit everything so you understand where to place glue and how everything fits together.

Next, let's construct the investigator card tray (A). This tray also stores ancient one cards.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom and both ends of outer wall (B) and connect to base (A).
- 2) Next, place glue on the bottom of end wall (C) and connect.
- 3) Next, place glue on the bottom and ends of the other outer wall (B) and connect on the opposite side.
- 4) Finally, place glue on the bottom of end wall (C) and connect.

Next, let's construct the spare/plastic base tray (D). This tray is designed to store tokens and/or plastic bases.

- 1) Lay base (D) down on your workspace. Apply glue to the bottom and both ends of outer wall (E) and connect to base (D).
- 2) Next, place glue on the bottom of end wall (F) and connect.
- 3) Next, place glue on the bottom and both ends of the other outer wall (E) and connect on the opposite side.
- 4) Next, place glue on the bottom of end wall (F) and connect.
- 5) Finally, I recommend placing the dividers (G) in the tray (no glue) while the tray dries to ensure a perfect fit.

Next, let's construct the investigator/gate tray (H). This tray is designed to store investigator and gate tokens. This tray also has a small compartment on one end for storing other large cardboard tokens, such as the lead investigator token or active expedition tokens.

- 1) Lay base (H) down on your workspace. Apply glue to the bottom and both ends of 3 inner rail walls (I) and connect to base (H) in the center area.
- 2) Next, place glue on the ends of the 3 rail walls (I) connected to the base (H) and the bottom of long wall (J) and connect. Repeat on the other side.
- 3) Next, place glue on the bottom and both ends of low side wall (K) and connect.
- 4) Next, place glue on the bottom and ends of the remaining rail wall (I) and connect on the other side.
- 5) Finally, I recommend placing a few dividers in the tray (no glue) while the tray dries to ensure a perfect fit.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

## Build Instructions

Finally, let's build the last three trays! After each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips). Also, remember to dry fit everything so you understand where to place glue and how everything fits together.

Next, let's build the dice tray (A) now.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom and both ends of 4 divider walls (C) and connect to base (A) in the center area.
- 2) Next, place glue on the ends of the 4 divider walls (C) connected to the base (A) and the bottom of long wall (B) and connect. Repeat on the other side.
- 3) Next, place glue on the bottom and both ends of the outer 2 divider walls (C) and connect on each side.

Next, let's build the health/sanity token tray (D).

- 1) Lay base (D) down on your workspace. Apply glue to the bottom and both ends of 3 divider walls (F) and connect to base (D) in the center area.
- 2) Next, place glue on the ends of the 3 divider walls (F) connected to the base (D) and the bottom of long wall (E) and connect. Repeat on the other side.
- 3) Next, place glue on the bottom and both ends of the outer 2 divider walls (F) and connect on each side.

Finally, let's construct the round token tray (G). Make sure you dry fit this tray to ensure you understand how it goes together.

- 1) Lay end wall (H) down on your workspace. Apply glue to one end of small inner wall (I) and connect to end wall (H). Repeat for the other 3 small inner walls.
- 2) Next, apply glue to the other ends of the small inner walls (I) connected to end wall (H) and connect to inner wall (J).
- 3) Next, apply glue to one end of both inner wall (J) and end wall (H) on one side and connect long outer wall (K).
- 4) Next, apply glue to one end of inner wall (L) and connect to long outer wall (K) and the rest of the structure. Repeat for the other 3 inner walls (L).
- 5) Next, apply glue to the ends of inner wall (J), end wall (H), and the 4 inner walls (L) and connect the other long outer wall (K).
- 6) Next, apply glue to both ends of end wall (M) and connect to the structure.
- 7) Finally, place glue on the bottom of the connected structure and connect to base (G).

Allow your trays to dry overnight and then place your components into the trays. You have completed the project!
