

INSERT FOR FORBIDDEN STARS™

Model FS-001 Storage Insert Kit for Forbidden Stars™

Complete insert kit with 9 removable trays and storage for minis, cards, and tokens

General Construction Tips

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.
- 3) Keep some paper towels handy for cleanup during build.
- 4) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored.
- 5) Check the build diagram included in the package for reference, including all parts, as well as build tips specific to this insert.
- 6) Always dry fit pieces first to ensure a good fit and to better understand how the kit goes together.
- 7) Allow your finished insert to dry overnight.
- 8) You can optionally sand and even stain your insert.
- 9) Don't hesitate to reach out to us if you have questions!

Unlike many of our inserts, this is not a licensed insert. All trademarks/marks are the property of their respective owners.

Build Instructions

This storage solution is designed to fit inside the Forbidden Stars box. There are a total of 9 trays to store all of your components. These instructions will cover constructing the removable trays one-by-one. Together, these components provide a versatile storage solution with room for all of the game components.

After each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips on plates #1/#2/#3/#4). Also, remember to dry fit everything so you understand where to place glue and how everything fits together. Let's begin by building the player faction trays (A). There are four of these trays. This tray is designed to store the faction token tray, faction cards, and faction minis.

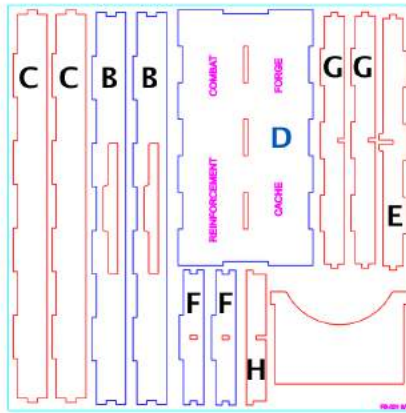

- 1) Lay base (A) down on your workspace. Apply glue to one side of the inner divider wall (C) and connect to rear card wall (B). Set aside for the moment.
- 2) Next, apply glue to the bottom of slot wall (D) and lightly connect to base (A).
- 3) Next, apply glue to the inner end tab of slot wall (D) and the bottom tabs of the structure you built in step #1 and connect to base (A).
- 4) Next, apply glue to side tab of rear card wall (B) and the bottom of outer divider wall (E) and connect.
- 5) Next, apply glue to side tab of inner divider wall (C) and the bottom of front outer wall (F) and connect.
- 6) Next, apply glue to side tab of slot wall (D) and the bottom of rear outer wall (G) and connect.
- 7) Finally, place glue on the ends and bottom of side wall (H) and connect.
- 8) Repeat build for the other three faction trays.

Next, let's construct the faction token trays (I). There are four of these trays. These trays are meant to be stored inside the player faction tray built above.

- 1) Lay base (I) down on your workspace.
- 2) Next, place glue on the bottom of the inner divider (L) and connect in the center cutout of base (I). Repeat for the other two inner dividers (L).
- 3) Next, place glue on the bottom of long wall (J) and the end tabs on one side of inner dividers (L) and connect. Repeat with the other long wall (J).
- 4) Finally, place glue on the bottom and end tabs of end wall (K) and connect. Repeat with the other end wall (K).
- 5) After allowing the tray to dry for ~5 minutes, place the tray lid on the tray to ensure a good fit and allow the glue to dry.
- 6) Repeat build for the other three trays.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

Build Instructions

Remember, after each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips). Also, remember to dry fit everything so you understand where to place glue and how everything fits together.

Let's build the top tray (A) now. This tray serves to store your game manuals and player faction boards.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom of outer handle wall (B) and connect to base (A).
- 2) Next, apply glue to bottom and ends of outer wall (C) and connect to outer handle wall (B) and base (A). Repeat for the other outer wall (C).
- 3) Finally, apply glue to the bottom of outer handle wall (B) and connect.

Next, let's build the lower token storage tray (D).

- 1) Lay base (D) down on your workspace.
- 2) Next, place glue on the bottom of the long inner divider (E) and connect in the center cutout of base (D).
- 3) Next, place glue on the ends of long inner wall (E) and on the bottom of end wall (F) and connect. Repeat with the other end wall (F).
- 4) Next, place glue on the bottom and end tabs of long wall (G) and connect. Repeat with the other long wall (G).
- 5) Finally, place glue on the underside of the end tabs of inner divider wall (H) and connect.

Next, let's build the upper token storage tray (I).

- 1) Lay base (I) down on your workspace.
- 2) Next, place glue on the bottom of the long inner divider (J) and connect in the center cutout of base (I).
- 3) Next, place glue on the ends of long inner wall (J) and on the bottom of end wall (K) and connect. Repeat with the other end wall (K).
- 4) Next, place glue on the bottom and end tabs of long wall (L) and connect.
- 5) Next, place glue on the bottom and end tabs of long wall (M) and connect.
- 6) Finally, place glue on the underside of the end tabs of inner divider wall (N) and connect.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

Build Instructions

Finally, let's build the last two trays! After each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips). Also, remember to dry fit everything so you understand where to place glue and how everything fits together.

Let's build the tile storage tray (A) now.

- 1) Lay base (A) down on your workspace. Apply glue to the bottom and both ends of outer wall (B) and connect to base (A).
- 2) Next, place glue on the bottom of outer wall (C) and connect.
- 3) Next, place glue on the bottom of the other outer wall (C) and connect on the opposite side.
- 4) Finally, place glue on the bottom of outer wall (B) and connect.

Finally, let's build the long storage tray (D). Note the placement of the long inner divider wall (E) and the etching when building.

- 1) Lay base (D) down on your workspace.
- 2) Next, place glue on the bottom of the long inner divider (E) and connect in the cutout of base (D).
- 3) Next, place glue on the ends of long inner wall (E) and on the bottom of end wall (F) and connect. Repeat with the other end wall (F).
- 4) Next, place glue on the bottom and end tabs of long wall (G) and connect.
- 5) Next, place glue on the bottom and end tabs of long wall (H) and connect.
- 6) Finally, place glue on the underside of the end tabs of inner divider walls (I) and place both of them in the tray.

Allow your trays to dry overnight and then place your components into the trays. You have completed the project!
