# MD-007 STORAGE SOLUTION

Storage Solution for Kickstarter Extras & More This solution is an enclosed box and can be used in the Massive Darkness™KS extras box or externally for other games.

## **Construction Tips**

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.
- 3) Keep some paper towels handy for cleanup during build.
- 4) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored.
- 5) Check the build diagram included in the package for reference, including all parts, as well as build tips specific to this insert.
- 6) Always dry fit pieces first to ensure a good fit and to better understand how the kit goes together.
- 7) Allow your finished insert to dry overnight.
- 8) You can optionally sand and even stain your insert.
- 9) Don't hesitate to reach out to us if you have questions!

### **Build Instructions**

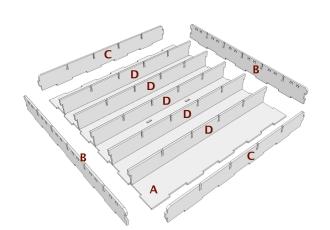

Please reference the diagrams to understand how each component fits together. Also, dry fit the pieces to understand how it goes together and ensure everything is oriented properly before applying glue. Finally, cleanup excess glue to ensure a proper fit and finish, especially in card areas.

#### **Building the Shallow Tray**

This shallow tray provides single and shared mini storage and includes two small holes that allow it to be securely held into position within the box.

- 1) Lay base (A) down on your workspace as noted on the right.
- 2) Next, place glue on the bottom of outer wall (B) and connect to base (A).
- 3) Next, place glue on the bottom and end tabs of outer wall (C) and connect.
- 4) Next, place glue on the bottom of outer wall (B) and connect.
- 5) Finally, place glue on the bottom and end tabs of outer wall (C) and connect.
- 6) Once your tray has had a few minutes to dry, place the inner walls (D) and dividers to ensure a perfect fit, but don't glue them into place until you understand how you want to store your minis.

### **Building the Large Enclosure**

This enclosure provides storage for larger minis and provides an enclosure for the shallow tray, as well as a lid to allow the solution to be used externally.

Note for Zombicide Invader use: you should omit the purple and brown inner walls (G, F) if you need to store additional player dashboards in this solution.

- 1) Place base (E) down on your workspace in the orientation noted to the left (widest lane on the right).
- 2) Next, place glue on the bottom of inner wall (F) and connect to base (A). Note that inner wall (F) has two tines that are larger than the others near the center. This allows the shallow tray (above) to lock into place when the enclosure is stored.
- 3) Next, place glue on the bottom of inner wall (**G**) and connect. Repeat for the other two inner walls (**G**).
- **4)** Next, place glue on the side tabs of each inner wall (**F**, **G**) and the bottom of outer wall (**H**) and connect. Repeat on the other side ensuring that the outer wall is oriented correctly (the lanes are not spaced equally).
- 5) Finally, place glue on the side tabs and the bottom of outer wall (I) and connect. Repeat on the other side.
- **6)** You can seat some inner dividers, but don't glue them until you determine what you want to store in them.
