PATH–003 STORAGE SOLUTION

Storage Kit for Pathfinder Adventure Card Game™

Complete insert kit providing storage for cards and tokens

Construction Tips

1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.

2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.

3) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored.

4) Check the build diagrams included in the package for reference, including all parts, as well as build tips specific to this insert.

5) **Always dry fit pieces first** to ensure a good fit and to better understand how the kit goes together.

6) Allow your finished insert to dry overnight.

7) You can optionally sand and even stain your insert.

8) Don't hesitate to reach out to us if you have questions!

Build Instructions

Please reference the diagrams to understand how each component fits together. Also, dry fit the pieces to understand how it goes together and ensure everything is oriented properly before applying glue. Finally, cleanup excess glue to ensure a proper fit and finish, especially in card, rail, and tray storage areas.

Building the Character Tray

The player tray is designed to store the character pawns, bases, and dice. The tray includes three dividers allowing for the creation of variable-sized compartments to support your growing collection.

1) Place base (**A**) in the orientation noted.
2) Next, place glue on the bottom and side tabs of end wall (**C**) and connect to base (**A**).
3) Next, place glue on the bottom of side wall (**B**) and connect. Repeat on the other side.
4) Finally, place glue on the bottom and side tabs of end wall (**C**) and connect.

After allowing your tray to dry for 5 minutes, place a couple of dividers (**Z**) in the tray to ensure a perfect fit once dry.

This tray is the bottom tray, when storing. When you need to remove the tray grab two dividers and lift. It works best when you store the character standees in the center with the dice on one side and the bases on the other.

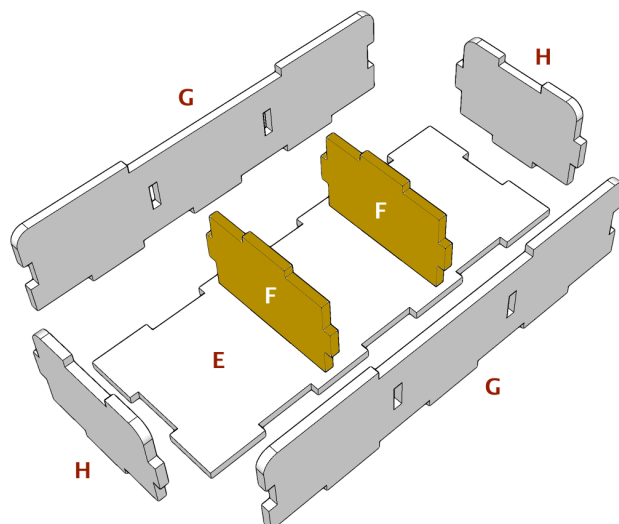

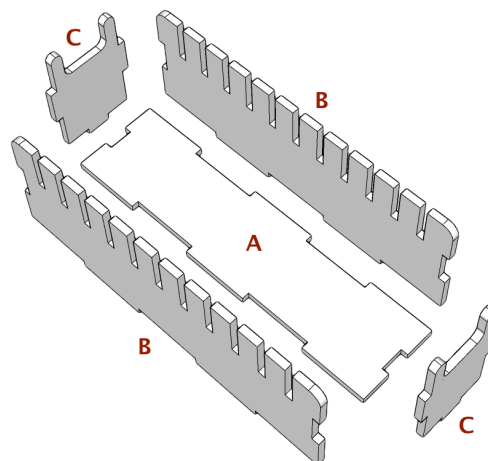

Building the Token Tray

The token tray provides three compartments for storing the hero point tokens.

1) Lay base (**E**) down on your workspace. Apply glue to the bottom and both side tabs of the two inner dividers (**F**) and connect to base (**E**).
2) Next, place glue on the bottom of outer wall (**G**) and connect. Repeat on the other side.
3) Next, place glue on the bottom and both side tabs of end wall (**H**) and connect. Repeat on the other side.

Once your tray has had five minutes to dry, place the tray lid (**Y**) on the tray to ensure a perfect fit, once dry.

This tray is intended to be stored on top of the character tray, sideways.

Build Instructions
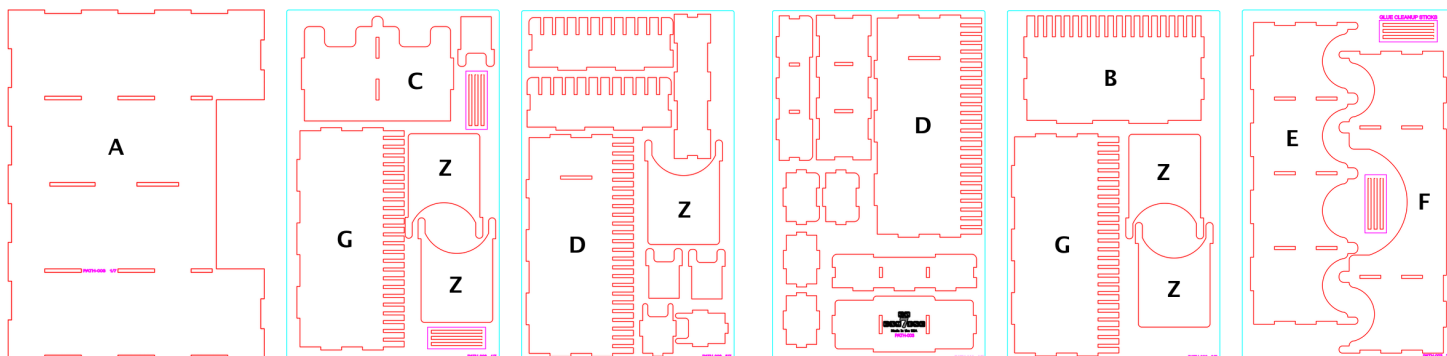

Please reference the diagrams to understand how each component fits together. Also, dry fit the pieces to understand how it goes together and ensure everything is oriented properly before applying glue. Finally, cleanup excess glue to ensure a proper fit and finish, especially in card, rail, and tray storage areas.

See note after step #2 below
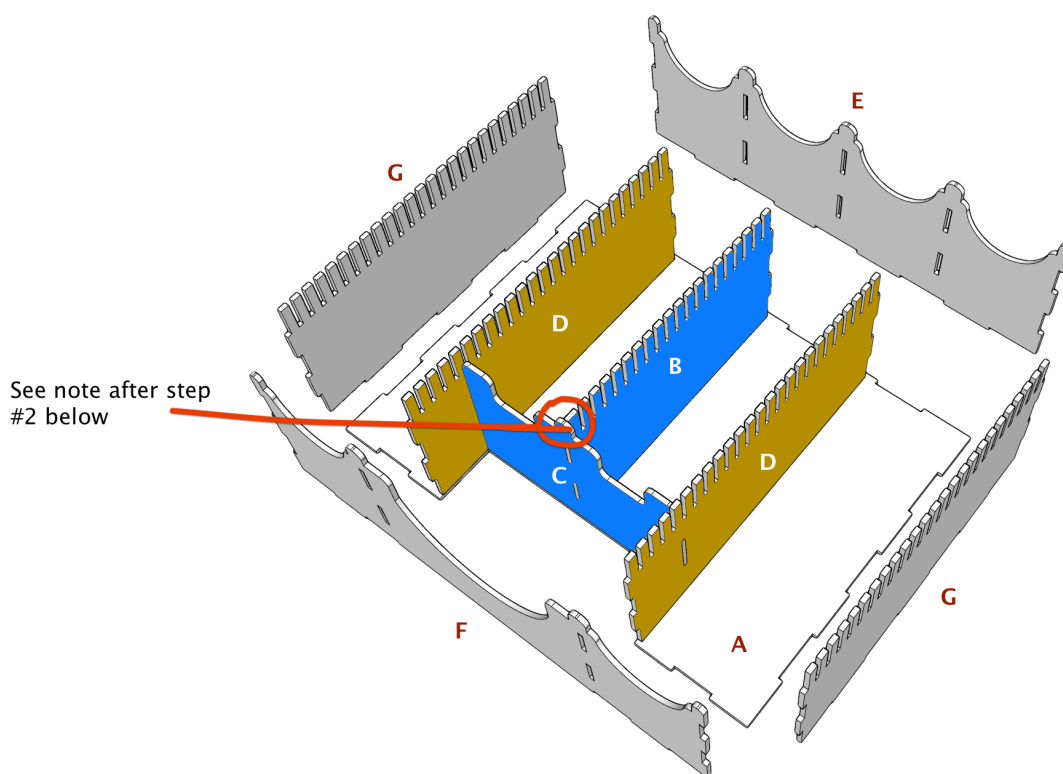

Building the Main Insert

The main insert is designed to store cards and the two smaller trays.

1) Place base (**A**) on your workspace in the orientation noted.
2) Next, place glue on the left side tabs of small inner wall (**B**) and connect to short wall (**C**).

Note: both pieces have an etched "1" where they should join together. If you do not join the 1's together, your dividers will not sit straight in the center two rows.

3) Next, place glue on both side tabs of short wall (**C**) and connect to inner wall (**D**). Repeat on the other side.
4) Next, place glue on the bottom tabs of the structure you built in the previous steps and connect to base (**A**).
5) Next, place glue on right side tabs of small inner wall (**B**), inner walls (**D**), and the bottom of outer wall (**E**) and connect.
6) Next, place glue on left side tabs of inner walls (**D**) and the bottom of outer wall (**F**) and connect.
7) Finally, place glue on the bottom and side tabs of outer wall (**G**) and connect. Repeat on the other side.

After allowing your tray to dry for 5 minutes, place a couple of dividers (**Z**) in each of the card lanes to ensure a perfect fit.
