

GH-005 STORAGE SOLUTION

Four (4) Character Storage Trays for use with Gloomhaven:
Jaws of the Lion characters

Construction Tips

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.
- 3) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored.
- 4) Check the build diagrams included in the package for reference, including all parts, as well as build tips specific to this insert.
- 5) Always **dry fit pieces first** to ensure a good fit and to better understand how the kit goes together.
- 6) Allow your finished insert to dry overnight.
- 7) You can optionally sand and even stain your insert.
- 8) Don't hesitate to reach out to us if you have questions!

Build Instructions

Please reference the diagram to understand how each component fits together. Also, dry fit the pieces to understand how the tray goes together and ensure everything is oriented properly before applying glue. Finally, cleanup excess glue to ensure a proper fit and finish, especially in card, rail, and tray storage areas.

Building the Small Character Trays (4x)

This group of 4 trays provides storage for each of your character cards, character ability cards, character boards, standees, minis, and tokens. It is easiest to punch out all plates, build stacks of each type of component, and then build each one.

- 1) Lay base (A) down on your workspace in the orientation noted.
- 2) Next, place glue on the left end tab of inner wall (C) and connect to inner wall (B) and then place glue on the bottom of this structure and connect to base (A).
- 3) Next, place glue on the left end tab of inner wall (E) and connect to inner wall (D) and then place glue on the bottom of this structure and connect to base (A). Note that the rounded corners should face inward.
- 4) Next, place glue on the end tab of inner wall (B) and the bottom of outer wall (F) and connect.
- 5) Next, place glue on the end tab of inner wall (E), the bottom and end tabs of end wall (G), and connect.
- 6) Next, place glue on the end tab of inner wall (D) and the bottom of outer wall (H) and connect.
- 7) Next, place glue on the end tabs and bottom of end wall (J) and connect.
- 8) Finally, after allowing 5 minutes to dry, place the lid (Z) on the tray to ensure a perfect fit once dry.

Repeat steps #1 - #8 three additional times.
