

# AH-002 STORAGE SOLUTION

Storage Kit for Arkham Horror™ 3rd Edition Under Dark Waves Expansion  
Insert kit providing storage for cards, tokens, and includes monster card dispenser

## Construction Tips

- 1) Each piece should be removed from the frames with gentle pressure back and forth. You should not need a knife to cut pieces free.
- 2) Our inserts are designed to be glued together. We use Sobo craft glue, but any glue that is tacky and dries clear will work fine. Tacky glue assists with building as it holds better during construction. You can use painter's/masking tape for some joins, but glue is always best.
- 3) Ensure you cleanup excess glue as you build. This is especially important in card lanes where dividers will be used or in spaces where a tray will be stored.
- 4) Check the build diagrams included in the package for reference, including all parts, as well as build tips specific to this insert.
- 5) Always **dry fit pieces first** to ensure a good fit and to better understand how the kit goes together.
- 6) Allow your finished insert to dry overnight.
- 7) You can optionally sand and even stain your insert.
- 8) Don't hesitate to reach out to us if you have questions!

## Build Instructions

This storage solution is designed to fit inside an AH core box or in AH: Under Dark Waves (third edition) and provides storage for cards and tokens. This solution also provides a monster deck dispenser for use during play to replace the cardboard dispenser provided in the first expansion. This storage system leaves a couple of millimeters free at the top for game manuals. These instructions will cover constructing the removable trays one-by-one.

After each piece is placed, you should cleanup excess glue using the provided glue sticks (short, thin wood strips on plate #1, for example). Also, remember to dry fit everything **FIRST** so you understand where to place glue and how everything fits together. Let's begin by building the two (2) large card trays (A). This tray is designed to store large cards (sleeved or unsleeved).

- 1) Lay base (A) down on your workspace. Apply glue to the bottom and both side tabs of outer wall (B) and connect to base (A).
- 2) Next, place glue on the bottom of end wall (C) and connect.
- 3) Next, place glue on the bottom and both side tabs of the other outer wall (B) and connect on the opposite side.
- 4) Next, place glue on the bottom of end wall (C) and connect.
- 5) Finally, we recommend placing a divider (Z) 2-3 spaces away from each end to ensure a perfect fit once dry.
- 6) Repeat steps 1 - 5 and construct the second large card tray.

Next, let's construct the small card tray (D). This tray is designed to store small cards.

- 1) Lay base (D) down on your workspace. Apply glue to the bottom and both side tabs of outer wall (E) and connect to base (D).
- 2) Next, place glue on the bottom of end wall (F) and connect.
- 3) Next, place glue on the bottom and both side tabs of the other outer wall (E) and connect on the opposite side.
- 4) Next, place glue on the bottom of end wall (F) and connect.
- 5) Finally, we recommend placing a divider (X) 2-3 spaces away from each end to ensure a perfect fit once dry.

Next, let's construct the long token tray (G). This tray is designed to hold tokens for setup and play.

- 1) Lay base (G) down on your workspace. Apply glue to the bottom of outer wall (H) and connect to base (G).
- 2) Next, place glue on the bottom and side tabs of end wall (J) and connect.
- 3) Next, place glue on the bottom of outer wall (H) and connect on the opposite side.
- 4) Next, place glue on the bottom and side tabs of end wall (J) and connect.
- 5) Finally, once you determine how you want to use the token tray, you can optionally glue the splitters (K) into position.

Allow your trays to dry overnight and then place your components into the trays. Instructions continue on next page.

## Build Instructions

Let's build the monster deck dispenser and the monster dispenser base. This dispenser is designed to replace the cardboard monster deck dispenser provided with the game and stores perfectly within the box along with the other trays. When storing, place the deck dispenser base inside the deck dispenser. Let's build the monster deck dispenser base first.

- 1) Place glue on the cutouts (where two parts meet) of support (B) and slide each side support (A) into support (B).
- 2) Next, place glue on the cutouts of support (D) and slide into the structure you built in step #1.
- 3) Next, place glue on the cutouts of support (C) and slide into the structure you built in step #2.

**Note:** DO NOT glue the monster deck dispenser base to the monster deck dispenser. It is meant to be attached for play and removed when storing the game.

Finally, let's construct the event deck dispenser (E). Dry fit first to ensure the rear and front walls are properly oriented.

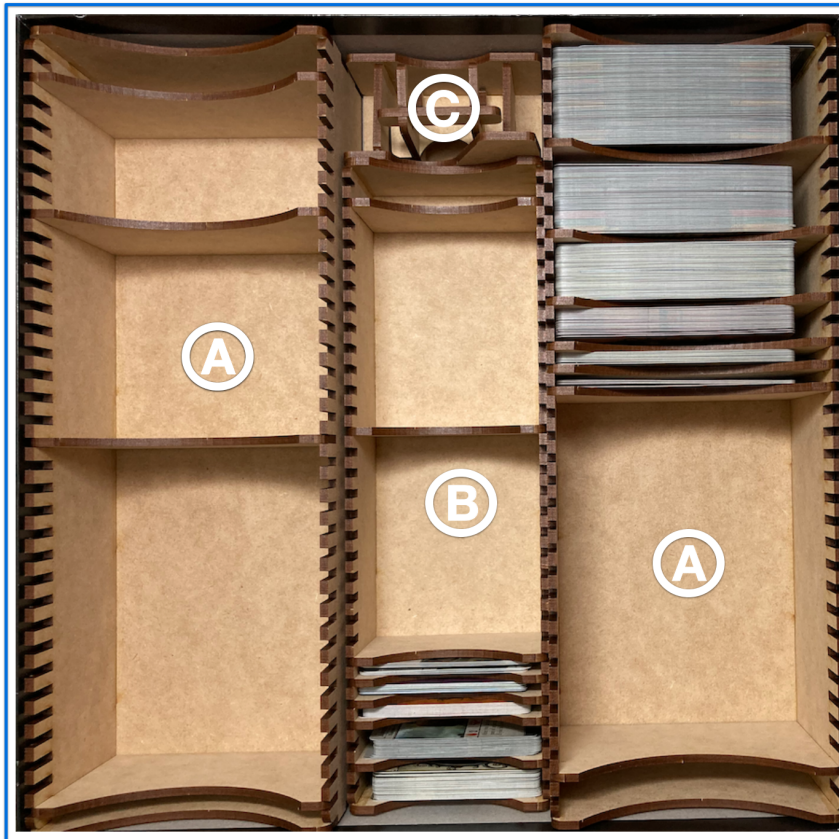

- 1) Lay base (E) down on your workspace.
- 2) Next, place glue on the bottom and side tabs of both side walls (F) and connect to base (E).
- 3) Next, place glue on the bottom of front wall (H) and connect.
- 4) Next, place glue on the bottom of rear wall (G) and connect.

Once your monster deck dispenser has had ten minutes to dry, you should connect the base to the deck dispenser. To do this, you will carefully seat the rear tabs of the base into the holes in the rear wall (G) of the deck dispenser, align the front of the base, and then slide the dispenser into the base. The holes on the rear wall of the deck dispenser acts as a guide that allows you to align the base properly and then simply slide the dispenser into the base. The base should sit at an angle on your table and act functionally the same as the cardboard dispenser provided in the game.

Allow your trays to dry overnight and then place your components into the trays. Project complete!

# Storing Your Trays in the Box

## Step One:

Place the two (2) large card trays (A), small card tray (B), and monster deck dispenser (C) in the box as illustrated.

## Step Two:

Place the long token tray (D) on top of the small card tray and the rulebook (not pictured) on top of all the trays and close the box.
